MULTIFUNCTION SPOTTER

Power source SPOTTER 1800 DIGITAL is a multifunction portable spotter, particularly suitable for repairing steel car bodies, sheet straightening, rivets welding and localised sheets heating with carbon electrode.
The “AUTOSTART” function can be enabled by the operator directly and simplifies the use of the portable spotter, as it allows having the welding process automatically started when the tool gets in touch with the sheet.
A built-in microprocessor control unit allows an easy and quick welder’s adjustment.
Besides the manual regulation modalities, the machine is provided with 4 memories optimised for the most common works. Moreover, the welding machine offers the possibility of a fine adjustment with a synergic curve.
The content of the memories can be customised directly by the user thus suiting one’s needs. The half-period regulation allows a more accurate job.
Its standard equipment includes:
- ground code 337696,
- hammer code 337638,
- kit of accessories and consumables code 337633-A.
